

Mass Transit & Rail

Aurora Technologies Inc. (ATI) has been supplying the mass transit and rail industry for decades. We specialize in electrical insulation, components for track side lubrication systems, protective coverings and replacement parts.

Our knowledgeable staff is familiar with equipment designs and is devoted to helping you with the material selection process. Our 200,000 square foot warehouse and manufacturing facility allows us to stock a wide range of materials and deliver your parts quickly.

To keep the supply chain as seamless as possible, we recently acquired Polyply Composites and now manufacture many of the materials we fabricate. Polyply's GPO-3 exceeds the Federal Railroad Administration requirements as they pertain to surface flammability (ASTM E 162), smoke generation (ASTM E 662) and toxicity (SMP-800-C).

Customer satisfaction along with on time delivery have always been our number one goal. We pride ourselves on being able to meet this goal every time an order is placed.

Typical Applications include:
Third Rail Insulators
Shields/Covers
Track Side Lubrication
Molded Panels
Insulating Brackets and Panels

Typical Material:
GPO-3
Lexan® 9034
Lexan® 9600
FR-4
Nylon
Delrin®
...And many more
